

Regulation of the Pelham Board of Health Restricting the Sale of Tobacco Products

A. Statement of Purpose:

Whereas, there exists conclusive evidence that tobacco smoking causes cancer, respiratory and cardiac diseases, negative birth outcomes, irritations to the eyes, nose, and throat;¹

Whereas, the U.S. Department of Health and Human Services has concluded that nicotine is as addictive as cocaine or heroin² and the Surgeon General found that nicotine exposure during adolescence, a critical window for brain development, may have lasting adverse consequences for brain development,³ and that it is addiction to nicotine that keeps youth smoking past adolescence;⁴

Whereas, a Federal District Court found that Phillip Morris, RJ Reynolds and other leading cigarette manufacturers “spent billions of dollars every year on their marketing activities in order to encourage young people to try and then continue purchasing their cigarette products in order to provide the replacement smokers they need to survive” and that these companies were likely to continue targeting underage smokers;⁵

Whereas, the majority (90%) of smokers begin smoking before the age of 25, and over 5 million youth and young adults (ages 25 and under) smoke;⁶

Whereas, cigars and cigarillos, can be sold in a single “dose;” and enjoy a low tax as compared to cigarettes;⁷

Whereas, spitless tobacco, including oral nicotine pouches, sales have increased from 100,000 units a year in 2018 to over 700,000 units a year by 2023, and the current use among Massachusetts high school students increased from 1% in 2019 to 3.2% in 2023;⁸

Whereas, nicotine use in any form during adolescence can cause addiction and can harm parts of the brain that control attention, learning, memory, mood, and impulse control. Nicotine use may also increase adolescents’ risk of future addiction to other drugs;⁹

Whereas, spitless tobacco, in particular nicotine salt packages, provides a discrete, cheap nicotine delivery system;¹⁰

Whereas, the Surgeon General found that exposure to tobacco marketing in stores and price discounting increase youth smoking;¹¹

Whereas, the U.S. Food and Drug Administration and the U.S. Surgeon General have stated that flavored tobacco products are “starter” products that help establish smoking habits that can lead to long-term addiction;¹²

Whereas, the U.S. Surgeon General recognized in his 2014 report that a complementary strategy to assist in eradicating tobacco-related death and disease is for local governments to ban categories of products from retail sale;¹³

Whereas, the Massachusetts Department of Environmental Protection has classified liquid nicotine in any amount as an “acutely hazardous waste;”¹⁴

Whereas, research indicates that the density and proximity of tobacco retailers increase smoking behaviors, including number of cigarettes smoked per day, reduced smoking abstinence during a quit attempt, and increased smoking prevalence among youth;¹⁵

Whereas, the density of tobacco retailers near adolescents’ homes has been associated with increased youth smoking rates and initiation of non-cigarette tobacco product use;¹⁶

Whereas, tobacco retailers are more prevalent in underserved communities, especially in neighborhoods with a higher proportion of African American or Hispanic residents;¹⁷

Now, therefore it is the intention of the Pelham Board of Health to regulate the sale of tobacco products.
