

Valley Green Energy

Municipal Aggregation Plan

April 26, 2023 - Draft

Valley Green Energy (Program) is a joint municipal aggregation program designed to bring the benefits of renewable energy and electricity choice to residents and businesses in participating communities and to help those communities achieve their sustainability goals. The Program will integrate additional renewable energy into the power supply, will support new local renewable energy projects and services in participating communities, and will offer a selection of supply options as well as the ability to leave the Program and return to utility Basic Service at any time with no penalty or fee.

Valley Green Energy was developed by the City of Northampton and the Towns of Amherst and Pelham (the Communities). It is anticipated that additional communities will join Valley Green Energy over time.

This document, the Municipal Aggregation Plan (Aggregation Plan), sets forth the key components of the Program.

I. Key Features

The key features of the Program will include:

Support for greenhouse gas emission reductions: Support for greenhouse gas (GHG) emission reductions will be the centerpiece of the Program. The Communities will evaluate multiple strategies, and will choose the strategy or combination of strategies that creates the most meaningful environmental impact in the most just way.

Price stability: The Program will seek to provide greater price stability when compared with utility Basic Service by entering into a series of competitively-bid electricity supply contracts for fixed-price periods such as one-to-three years.

Competitive pricing. The Program will also seek to provide competitive prices and possible cost savings, but savings cannot be guaranteed.

Automatic enrollment and opting out: Eligible customers¹ will be automatically enrolled in the Program unless they opt out. Customers can opt out of the Program at any time, either before enrollment or after, with no fee.

¹ Eligible customers shall include (1) basic service customers; (2) basic service customers who have indicated that they do not want their contact information shared with competitive suppliers for marketing purposes; and (3) customers receiving basic service plus an optional green power product that allows concurrent enrollment in either basic service or competitive supply. Eligible customers shall not include: (1) basic service customers who have asked their electric distribution company to not enroll them in competitive supply; (2) basic service customers enrolled in a green power product program that prohibits switching to a competitive supplier; and (3) customers receiving competitive supply service. Order on Eligible Customers, D.P.U. 16-10, at 19 (2017).

II. PROGRAM OPTIONS

The Program will give participants a choice in the percentage of renewable energy and price of their electricity supply by offering multiple Program Options. Because reducing GHG emissions is a driving motivation for the Program, the Communities anticipate offering a level of renewable energy above the state minimum requirement, known as the Renewable Portfolio Standard (RPS), in some of the Program Options. Specifically:

1. VGE Standard Green

The Program will provide a Standard, or default, option that includes a higher renewable energy content than is included in utility Basic Service. The additional renewable energy content will come from additional Renewable Energy Certificates (RECs)² over and above the RPS requirement. The additional RECs may be Class I RECs, or other types of RECs, or a combination. The Program will conduct a competitive procurement and establish the price and type and percentage of RECs after it receives price bids.

2. VGE 100% Green

In order to give residents and businesses more freedom to make individual decisions about the price and environmental impact of their power supply, the Program will offer an additional option that includes 100% renewable energy. The additional renewable energy content will come from additional RECs over and above the RPS requirement. The additional RECs may be Class I RECs, or other types of RECs, or a combination. The Program will conduct a competitive procurement and establish the price and type of RECs after it receives price bids.

3. VGE Budget

The Program will also offer an option that includes no additional renewable energy above state minimum requirements. This option is expected to provide greater price stability than utility Basic Service, and may result in lower prices overall during the time of the contract than utility Basic Service, although savings cannot be guaranteed. The Program will conduct a competitive procurement and establish the price after it receives price bids.

4. VGE Local

The Program may also offer an option that features electricity and/or RECs from generators in or near participating communities. The Program will establish the composition and price of this option based on the availability and cost of local generation. This option may not be available at program launch, and may be added later.

III. Procedural Requirements

The Municipal Aggregation Statute, [G.L. c. 164, § 134 \(Aggregation Statute\)](#), sets out the legal requirements for a municipal aggregation program. Those requirements include procedural requirements, specified plan elements, and substantive requirements. The procedural requirements are discussed below, and the other requirements in the sections that follow.

² A REC represents the environmental attributes associated with electricity generation. RECs are part of an accounting system that enables generators to sell, and customers to buy, renewable electricity.

1. Local Approval

The Aggregation Statute provides that a town may initiate the process to aggregate electrical load upon authorization by a majority vote of town meeting and that a city may do so by a majority vote of the city council with the approval of the mayor or city manager. The Communities obtained such authorizations and copies are provided as Attachment A to Exhibit 3 of the Petition for Approval of Municipal Aggregation Plan (Petition).

2. Consultation with the Department of Energy Resources

The Aggregation Statute also requires municipalities to consult with the Department of Energy Resources (DOER) in developing an aggregation plan. The Communities submitted a draft of the Aggregation Plan to DOER, and representatives of the Communities discussed the draft with DOER. DOER's consultation letter is provided as Attachment B to Exhibit 3 of the Petition.

3. Citizen Review

The Communities made the Aggregation Plan available for review by their citizens by posting the plan for comment and holding a joint public meeting on _____. Comments received are attached as Attachment G to Exhibit 3 of the Petition.

IV. Elements of the Plan

The Aggregation Statute requires that an aggregation plan contain the following elements:

- Organizational structure
- Operations
- Funding
- Details on rate setting and other costs to participants
- The method of entering and terminating agreements with other entities
- The rights and responsibilities of Program participants
- The procedure for termination of the Program

Each of those elements is discussed in turn below.

1. Organizational Structure

The organizational structure of the Program will be as follows:

Valley Green Energy Partners Group

The Valley Green Energy Partners Group (Partners Group) sets the policy direction and approves the Aggregation Plan. The Partners Group is comprised of one person appointed from each participating community. The Partners Group seeks to reach consensus in all matters relating to Valley Green Energy. Where consensus cannot be reached, voting will take place on a population-weighted basis, with more than 50% of the weighted vote required for approval.

Lead Community

The Lead Community oversees the consultant contract and other contracts. Currently, under the Communities' Memorandum of Understanding, the Town of Amherst is designated to serve as Lead Community.

Consultants

Valley Green Energy's aggregation consultant (Consultant) will manage the aggregation under the Lead Community's direction. The Consultant's responsibilities will include managing the supply procurement, developing and implementing the public education plan, interacting with the local distribution companies, monitoring the supply contract, maintaining the Program website, providing customer service, and producing required reports. Valley Green Energy selected MassPowerChoice, LLC to provide these services for an initial term.

Competitive Supplier

The Competitive Supplier will provide power for the aggregation, provide customer support including staffing a toll-free number for customer questions, and fulfill other responsibilities as detailed in the Competitive Electric Service Agreement (ESA).

2. Operations

Following approval of the Aggregation Plan by the Department of Public Utilities (DPU), the key operational steps will be:

- a. Issue a Request for Qualifications (RFQ) and Request for Prices (RFP) and select a winning competitive supplier
- b. Implement the public education effort for the approved plan, including notice of the specific features and prices for Program options and of the opt-out period, and resources to obtain additional information and implement customer choices
- c. Enroll customers and provide service, including required information disclosures
- d. Submit reports to the DPU and DOER

a. Issue a Request for Qualifications and Request for Proposals and select winning competitive supplier

After the DPU approves the Aggregation Plan, the next step is to procure the electricity supply.

The Program will issue an RFQ to leading competitive suppliers, including those currently supplying aggregations in Massachusetts and other states. The RFQ will require that the supplier satisfy key threshold criteria, including:

- Licensed by the DPU
- Strong financial background
- Experience serving the Massachusetts competitive market or municipal aggregations in other states
- Demonstrated ability, supported by references, to provide strong customer service

In addition, suppliers will be required to agree to the terms and conditions of a Competitive Electric Service Agreement (ESA), substantially in the form of the model ESA. The agreement requires the supplier to:

- Provide all-requirements service
- Allow customers to exit Program any time with no penalty or fee
- Agree to specified customer service standards
- Comply with all requirements of the DPU and the local distribution company

The Program will not enter into an ESA with a competitive supplier unless the ESA is fully consistent with its Department-approved Aggregation Plan.

Valley Green Energy will issue an RFP for price bids from suppliers that meet the threshold criteria and agree to the terms and conditions prescribed in the ESA. If none of the bids are satisfactory, Valley Green Energy will reject all

bids and repeat the solicitation as often as needed until market conditions yield a price that is acceptable to the Valley Green Energy.

Valley Green Energy will solicit bids for power supply that meets the Massachusetts Renewable Portfolio Standard (RPS) requirements and for a supply containing additional renewable energy over and above the RPS requirements. Valley Green Energy will seek a variety of bids that include renewable electricity from different sources, and will choose the proposal that offers what Valley Green Energy determines to be the best combination of environmental benefit and price.

The renewable energy in the power supply will be documented using RECs. The RECs used for RPS compliance will be created and recorded in the New England Power Pool Generation Information System (NEPOOL GIS). RECs in excess of the RPS requirements will be certified as having been retired and not re-sold, either through the NEPOOL GIS, another regional tracking system, or third-party certification.

b. Implement public education effort, including notice of the pre-launch opt-out period

Once a winning supplier is selected, Valley Green Energy will implement a comprehensive public education effort.

The delivery of a public education effort and associated materials are pivotal to ensuring clarity, participation, and enthusiasm for the aggregation. Valley Green Energy will use a variety of channels to communicate the Program's objectives, the primary terms and conditions of the contract, the right to opt out of the Program, and the Program options.

The public education plan will include both broad-based efforts and an Opt-Out Notice to be mailed to every eligible customer.

Please see Attachment A for Valley Green Energy's Education and Outreach Plan, which sets forth in detail the efforts Valley Green Energy will undertake.

Opt-Out Notice

As a part of the Program's public education and outreach efforts, an Opt-Out Notice will be mailed to every eligible customer after the electricity supply contract is signed and before Program launch. The notice will be an official Program communication, and it will be sent in an envelope clearly marked as containing time-sensitive information related to the Program. The notice will: (1) introduce and describe the Program; (2) inform eligible customers of their right to opt out and that they will be automatically enrolled if they do not exercise that right; (3) explain how to opt out; and (4) prominently state all Program charges and compare the price and primary terms of the Program's competitive supply to the price and terms of utility Basic Service.

The direct mailing will include a language access document, an Opt-Out Reply Card, and a postage-paid return envelope. The language access document will provide instructions in 26 languages to have the Opt-Out Notice translated. The reply card will identify the date by which the return envelope must be postmarked in order for the customer to be opted out prior to being enrolled.

The Opt-Out Notice and Reply Card will be designed by the Valley Green Energy and printed and mailed by the Competitive Supplier, who will process the opt-out replies. An exemplar Opt-Out Notice is provided with this Aggregation Plan as Attachment B-1. An exemplar language access document cover sheet is provided as Attachment B-2. An exemplar opt-out reply card is provided as Attachment B-3. An exemplar opt-out reply card return envelope is provided as Attachment B-4.

The Town has requested a waiver of the requirement to provide a contract summary form to directly to customers that receive the Opt-Out Notice because the documents are duplicative. Summary forms for each Program Option will be available on the Program website and on file at each municipality's offices.

c. Enroll eligible customers that do not opt out and provide service, including information disclosure

After the completion of the opt-out period, the Competitive Supplier will enroll into the Program all eligible customers that did not opt out. Customers whose Opt-Out Notices are returned to the Competitive Supplier as undeliverable will not be automatically enrolled.

The enrollments shall commence no sooner than 37 days after the mailing of the Opt-Out Notice. All enrollments and other transactions between the Competitive Supplier and the local distribution company, Eversource, will be conducted in compliance with the relevant provisions of DPU regulations, Eversource's *Terms and Conditions for Competitive Suppliers* and National Grid's *Terms and Conditions for Municipal Aggregators*, and the protocols of the Massachusetts Electronic Business Transactions Working Group.

Once customers are enrolled, the electricity supplier will provide all-requirements power supply service. The supplier will also provide ongoing customer service and process new customer enrollments, ongoing opt-outs, opt-back-ins, and customer selections of Program options. As below under Section V.2. Reliability, the local distribution company remains responsible for and is the contact entity related to outages and other local delivery issues.

As new eligible customers move into Valley Green Energy communities, they will have an opportunity to join the Program. New eligible customers will initially be placed on Basic Service. They will then receive an Opt-Out Notice and will be enrolled in the Program unless they choose to opt out within the opt-out period.

Customers may proactively enroll by contacting the Program. Customers that proactively enroll in the Program will be sent a Program Summary Form³ for the option they selected.

As part of its ongoing service, the Program will provide the disclosure information required by G.L. c. 164, § 1(F)(vi) and 220 C.M.R. § 11.06. Like the other Massachusetts aggregations, the Valley Green Energy has requested a waiver from the requirement that the disclosure label be mailed to every customer and seeks permission instead to provide the information through alternative means, including press releases, postings at town and city halls, and postings on the Program website. Please see Attachment A for the Education and Outreach Plan which provides greater detail about the alternative disclosure strategy.

Each member municipality will provide in a prominent location on its municipal website an appropriate link to the dedicated Program website, in addition to basic information about the Aggregation Plan. Once completed, all Aggregation Plan documents and education materials will be available and updated on the Program website.

d. Submit reports to the DPU and DOER

On an annual basis, the Valley Green Energy will report to the DPU and DOER on the status of the Program, including all information requested by the DPU or DOER.

³ The Program Summary Form will be the same as the Contract Summary Form that the DPU specifies for competitive retail suppliers, with minor texts edit to make the form appropriate for participants in an aggregation program. For example, because aggregation program participants do not sign a contract, the term "contract" will be replaced by "Program" or "Option" as appropriate.

e. Community Shared Solar

The Program may allocate credits from a Community Shared Solar Program or a Low-Income Community Shared Solar Program pursuant to 225 CMR 20.00, if and to the extent available.

3. Funding

The costs of the Program will be funded primarily through the supply charge paid by Program participants through the supply contract.

The principal Program cost will be the Competitive Supplier's charge for the power supply. This charge will include the costs of RECs and will be established through the competitive solicitation for a supplier.

The administrative costs of the Program will be funded through a per kilowatt-hour adder that will be included in the supply price and paid by the Competitive Supplier to the Consultant, as specified in the Competitive Electric Service Agreement. This fee will cover the services of the Consultant, including developing the Aggregation and Outreach and Education Plans, managing public outreach efforts, managing the DPU approval process, managing the supply procurement, developing and implementing the post-approval public education plan, providing customer support, interacting with the local distribution companies, monitoring the supply contract, and providing ongoing reports. This charge has been set for the initial term of the Consultant's contract at \$0.001 per kilowatt-hour.

In addition, Valley Green Energy may direct the Competitive Supplier to include in the supply price an Operational Adder of up to \$0.001 per kilowatt-hour to be payable by the Competitive Supplier to Valley Green Energy. Funds collected through the Operational Adder shall be used to support the operational costs of the program, including, for example, 1) operational and personnel costs of Valley Green Energy that are related to the Program; 2) REC purchases; 3) enhanced customer education regarding energy bills and the environmental impacts of electricity use; and 4) other forms of support for local energy projects that create benefits for program participants.

4. Rate Setting and Other Costs to Participants

As described above, the Program's electricity supply charge will be set through a competitive bidding process and will include the administrative adder and other available adders. Additionally, power supply charges may include credits or discounts applicable to certain rate classes (for example, from a low-income community shared solar program). Prices, terms, and conditions will vary by Program Option and may differ among the rate classifications established in the tariffs of the local distribution company. For each rate class, prices will be fixed for periods at least as long as the Basic Service price period for the class.⁴

If there is a change in law (i.e., "regulatory event" or "new taxes" per Article 18 of the ESA) that results in a direct, material increase in costs during the term of the ESA (see Article 18 of the ESA), Valley Green Energy and the Competitive Supplier will negotiate a potential change in the Program price. At least 30 days prior to the implementation of any such change, the Program will notify Program participants through a direct mail notice and by issuing a media release and posting a notice in town and city halls and on the Program website. Valley Green Energy will notify the DPU Consumer Division prior to the implementation of any change in Program price related to a change in law. Such communication shall occur no less than ten days prior to the consumer notification and

⁴ Basic Service pricing periods vary by customer class. For residential and small business customers, the prices change every six months. For medium and large business customers, prices change quarterly.

include copies of all media releases, town and city hall and website postings, and other communications Valley Green Energy intends to provide to customers regarding the change in price.

The Program affects only customers' electricity supply charge. Delivery charges will be unchanged and will continue to be charged by the local distribution company in accordance with tariffs approved by the DPU. Also, low-income discounts provided by the local distribution company will continued to be applied.

Participants will continue to receive one bill from their local distribution company that includes both the electricity supply charge and their local distribution company's delivery charges. Required taxes will be billed as part of the electricity supply charge. Customers are responsible for identifying and requesting an exemption from the collection of any tax by providing appropriate documentation to the Competitive Supplier.

5. Method of Entering and Terminating Agreements with Other Entities

Valley Green Energy's process for entering, modifying, enforcing, and terminating all agreements associated with the Aggregation Plan will comply with the memorandum of understanding, federal and state law and regulations, and the provisions of the relevant agreement.

The process for entering the ESA is described in §IV.2.a.

If Valley Green Energy determine that they requires the services of an aggregation consultant after the expiration of the existing agreement with MassPowerChoice, Valley Green Energy will solicit proposals for, and evaluate, potential aggregation consultants using a competitive procurement process or alternative procedure which Valley Green Energy determine to be in the best interest of Program participants and consistent with all applicable local, state, and federal laws and regulations.

6. Rights and Responsibilities of Program Participants

All participants will have the right to opt out of the Program at any time without charge. They may exercise that right by any of the following: 1) calling the Competitive Supplier's toll-free number; 2) submitting the opt-out form on the Program website; 3) contacting their local distribution company and asking to be returned to Basic Service; or 4) enrolling with another competitive supplier.

All participants will have the consumer protection provisions of Massachusetts law and regulations, including the right to question billing and service quality practices. Customers will be able to ask questions of and register complaints with Valley Green Energy, the Consultant, the Competitive Supplier, the local distribution company, and the DPU. As appropriate, Valley Green Energy and Consultant will direct customer complaints to the Competitive Supplier, their local distribution company, or the DPU.

Participants will be responsible for paying their bills, for providing access to metering and other equipment necessary to carry out utility operations, and for complying with all applicable laws, regulations, and tariffs.

7. Extension or Termination of Program

Prior to the end of the term of the initial Electric Service Agreement, Valley Green Energy will solicit bids for a new supply and plans to continue the Program with the same or a new competitive supplier.

When Valley Green Energy determines that it is timely to solicit bids, it will repeat the procurement steps described in §IV.2.a. If Valley Green Energy receives a satisfactory price bid, it will enter a new ESA with the winning bidder.

At least thirty days prior to the effective date of a new ESA, Program participants will be informed of the ESA and any price or program changes through postings on the Program and municipal websites, media releases, social media, and a physical posting in municipal buildings. Additionally, Program participants will be mailed the automatic renewal notification prescribed by the DPU for competitive retail suppliers. The notification will comply with all Department language access and design requirements, and will inform Program participants that they may opt out of the Program at any time and return to Basic Service at no charge. The notification will be sent in a clearly marked envelope indicating that it contains important information from Valley Green Energy regarding customers' participation in the Program.

If Valley Green Energy seeks to change the voluntary renewable energy content for any option, it will notify Program participants of the change as described above. Customers enrolled in an opt-in option that will change voluntary renewable content will be informed that they must affirmatively re-enroll in that option (or affirmatively enroll in another option or opt-out) or they will be enrolled in the new standard option. Customers enrolled in the standard option (or an opt-in option where the renewable energy content does not change) will be notified that they will be renewed in their current option unless they opt out.

Although Valley Green Energy is not contemplating a termination date, the Program could be terminated upon the termination or expiration of the Competitive Electric Service Agreement without any extension, renewal, or negotiation of a subsequent supply contract, or upon the decision of the Valley Green Energy Partners Group to dissolve the Program effective on the end date of any outstanding supply agreement or for other legal or contractual reason. In the event of termination, customers would be returned to their local distribution company's Basic Service via Electronic Data Interchange (EDI) by the Competitive Supplier in accordance with the rules set forth in the Electronic Business Transactions (EBT) Working Group Report unless the customers choose an alternative competitive supplier.

Valley Green Energy will notify the local distribution company of the planned termination or extension of the Program. In particular, Valley Green Energy will provide notice to the local distribution company: (1) 90 days prior to a planned termination of the Program; (2) 90 days prior to the end of the anticipated term of the Program's ESA; and (3) four business-days after the successful negotiation of a new electricity service agreement.

Valley Green Energy will notify Program participants of Program termination by issuing a media release and posting a notice on the Valley Green Energy website and the websites of the member municipalities. In addition, Program participants will receive notice of a supplier change on their bill from their local distribution company.

Valley Green Energy will notify the Director of the DPU's Consumer Division 90 days prior to a planned termination of the Program. Such communication shall include copies of all media releases, website postings, and all other communications Valley Green Energy intends to provide to customers regarding the termination of the Program and the return of participants to Basic Service.

V. Substantive Requirements

The Aggregation Statute also requires that the aggregation plan satisfy three substantive requirements:

- Universal access
- Reliability
- Equitable treatment of all customer classes

The Program will satisfy all three requirements, as discussed below.

1. Universal Access

The Aggregation Plan provides for universal access by guaranteeing that all customer classes will be included in the Program under equitable terms.

Most importantly, all customers will have access to the Program. All eligible customers will be automatically enrolled in the Program unless they choose to opt out.

All customers will have the right to opt out of the Program at any time. Customers that opt out and then return to the Program will be offered a price that reflects market conditions at the time of their return.

2. Reliability

Reliability has both physical and financial components. The Program will address both through the ESA with the Competitive Supplier. From a physical perspective, the ESA commits the Competitive Supplier to provide all-requirements power supply and to use proper standards of management and operations (ESA, Article 7). The local distribution company, Eversource, will remain responsible for delivery service, including the physical delivery of power to the consumer, maintenance of the delivery system, and restoration of power in the event of an outage. From a financial perspective, the ESA requires the supplier to pay actual damages for any failure to provide supply at the contracted rate (i.e., to pay the difference between the contract rate and the utility supply rate). The ESA also requires the Competitive Supplier to maintain insurance (ESA, Article 16). Accordingly, the Program satisfies the reliability requirement of the Aggregation Statute.

3. Equitable Treatment of all Customer Classes

The Aggregation Statute requires “equitable” treatment of all customer classes. The DPU has determined that this does not mean that all customers must be treated “equally,” but rather that similarly-situated classes be treated “equitably.” In particular, the DPU has allowed variations in pricing and terms and conditions among customer classes to account for the disparate characteristics of those classes.

The Program makes several distinctions among groupings of customers. First, the Program may distinguish among rate classes by soliciting separate pricing for each of those classes. The Program will use the rate classes established by the local distribution company.

Second, the Program will distinguish among customers receiving different Program options. Customers will be charged the price associated with the Program option they receive.

Third, the program makes distinctions according to customers’ enrollment scenario. Those distinctions are described in the tables below:

Enrollment procedures

Enrollment scenario	Residential	Small C&I	Medium C&I	Large C&I
Eligible customer at program initiation	An Opt-Out Notice will be mailed to all eligible customers before Program launch. After the completion of the opt-out period, the Competitive Supplier will enroll eligible customers that did not opt out. The enrollments shall commence no sooner than 37 days after the mailing of the Opt-Out Notice.			
New eligible customers identified	An Opt-Out Notice will be mailed to all new eligible customers identified after Program initiation. After the completion of the opt-out period, the Competitive Supplier will enroll			

after Program initiation	eligible customers that did not opt out. The enrollments shall commence no sooner than 37 days after the mailing of the Opt-Out Notice.
Competitive supply customers at Program initiation who wish to enroll in the Program after their competitive supply contract ends	Customers may request enrollment by contacting Program customer support or the Program's electricity supplier.
Customers who opt out and subsequently wish to enroll	Customers may request enrollment by contacting Program customer support or the Program's electricity supplier.

Pricing procedures

Enrollment scenario	Residential	Small C&I	Medium C&I	Large C&I
Eligible customer at program initiation	Standard Program price			
New eligible customers identified after Program initiation	Standard Program price		Market-based price	
Competitive supply customers at Program initiation who wish to enroll in the program after their competitive supply contract ends	Standard Program price		Market-based price	
Customers who opt out and subsequently wish to enroll during the same contract term	Market-based price			

VI. Planned Schedule

Milestone	Day Estimate
RFQ for competitive supplier issued	Day 1
RFP for final supply prices issued	Day 30
Electricity Supply Agreement executed	Day 44

Broad-based educational campaign begins, including the announcement of supply contract and pricing and an update of Program web site, and including an opt-up campaign for greener power.	Day 45
Opt-Out Notice mailed to customers	Day 55
Opt-out postmark deadline	Day 88
Earliest date program enrollment may begin	Day 92

The planned schedule is presented for illustrative purposes. The final schedule will be established when Valley Green Energy receives DPU approval.⁵

VII. Conclusion

The Program meets all of the requirements of the Aggregation Statute, including universal access, a reliable power supply, and equitable treatment of all customer classes, and will bring the benefits of renewable energy and electricity choice to residents and businesses.

⁵ The planned schedule is designed to give the Competitive Supplier sufficient time to satisfy EDI testing requirements. However, the schedule will be adjusted if additional time is needed to meet those requirements.
